

Voyageurs National Park Vegetation Map Class for Wet Meadow / Fen Mosaic / Complex

The map class "[Wet Meadow / Fen Mosaic / Complex](#)" is composed of the following vegetation associations, each described separately:

- [Canada Bluejoint Eastern Meadow](#)
- [Northern Sedge Wet Meadow](#)
- [Wiregrass Sedge Shore Fen](#)
- [Eastern Reedgrass Marsh](#)
- [Midwest Cattail Deep Marsh](#)

This map unit was created to account for photo limitations and patterns of the vegetation on the ground. The photographs do not always show distinctive signatures between these associations, so mapping specific associations cannot be done confidently. Also, these associations often occur together in a mosaic pattern and fall below the minimum mapping unit of .5 ha., so they are not mapped as separate polygons.
